## ENVIRONMENTAL PLANNING

- Desktop screening assessments, constraints analysis, and mitigation
- Regulator engagement, consultation, and liaison
- Location scouting and infrastructure site planning
- Regulatory permitting, authorizations, and approvals applications and compliance management
- Biophysical/ecological assessments
- Avian and wildlife sweeps and surveys
- Fish and aquatics
- Environmental Construction Operations (ECO) plans
- Environmental Protection Plans (EPP)
- Erosion sediment control implementation and monitoring
- Post-construction reclamation assessment

## RECLAMATION AND REMEDIATION

- Phase I and Phase II Environmental Site Assessments
- Remedial action plans and execution
- Risk management
- Reclamation planning and execution
- Detailed site assessments
- Soil and groundwater monitoring
- Site-specific liability assessments
- Regulatory compliance monitoring

## ARCHAEOLOGY

- Applications for Historical Resources Act (HRA) approvals
- Archaeological Overview Assessments (AOA)
- Preliminary Field Reconnaissance (PFR) studies
- Archaeological Impact Assessments (AIA)
- Site Alteration Permit (SAP) application and compliance
- Analysis of culturally modified trees
- Impact management, site mitigation, and monitoring
- Permitted and non-permitted forestry investigations
- Archaeological investigation, resource inventory, and evaluation

## ENVIRONMENTAL DRILLING

- Highly maneuverable for remote sites due to small footprint
- Tracked and low ground-pressure to gain access to low-grade sites
- Direct push drill system to maintain vertical profiling of the soil horizons
- Quick mobilization across British Columbia and Alberta
- Drilling to support intrusive environmental investigations and monitoring well installations

## GIS (GEOGRAPHIC INFORMATION SYSTEM)

Across H3M service divisions, our GIS team provides support for seamless data collection, analysis, and visual representation of the numerous variables that can influence project completion. With mobile data collection leading to near real-time visual representation, our GIS outputs provide a secure and customized data management process for all project types. Investigations and monitoring well installations
